

Volcano Dreams Crossword Puzzle

Down:

1. rainwater that is superheated by hot rocks deep beneath the earth and then rises through thin cracks in the rocks
2. a light and porous rock with gritty texture that forms when lava cools quickly and gas bubbles are trapped in the forming rock
3. fountains of hot water and steam that are ejected into the air
4. magma that has erupted from a volcano
5. a large crater-like depression that is created when an emptied volcano collapses in on itself after erupting
6. regular polygonal columns that are formed when lava cools
9. a long, narrow, deep crack

Across:

7. small dust-like particles that blow out of a volcano during an eruption and blanket the earth for miles around
8. hot liquid rock deep under the earth's surface
10. glassy, black volcanic rock formed from lava that cools rapidly during an eruption
11. boiling ponds made of mud that bubbles and spatters
12. places where the superheated water exits the rock through a large fissure or a funnel-shaped hole
